Name :- INDAL BIND
ROLL_no :- 23f1002973

This is my project for household service with the brand name **Curafix,** as the name curafix we work on fixing some thing in Household field, as per project question statement in this curafix app has all feature like admin,professional and users, where admin have do anything in app and professional can take service and work on that

Overall this is multi-user app which providing home servicing and solution

Step I follow to do this project

1) I make rough project structure in figma platforms :- project_rough – Figma
2) I start making the database where my ER-Diagram look like

i.

3) Start coding with app.py and index.html and so on…
   a. As per question WireFrame are asking I implement as same as same nothing change

Frame_work and library I used

   a) Flask for application code
   b) Jinja2 templates+Bootstrap for styling and some pre define code of javascript
   c) SQLite for database
